

**ABSTRACT OF THE DISCLOSURE**

5           A pump control and management system for monitoring and  
controlling sump pumps as well as providing supplemental controls  
and alarms. The pump control and management system includes a  
sump pump, a level sensing assembly, a control assembly, and at  
least one local sensor. The sump pump is designed for pumping  
10   water out of a sump pit. The level sensing assembly is preferably  
positioned within the sump pit for detecting a level of water in the  
sump pit. The control assembly is electrically coupled between an  
electrical service connection and the sump pump. The control  
assembly monitors electrical current drawn by the sump pump. The  
15   control assembly is also operationally coupled to the level sensing  
assembly. The control assembly activates the sump pump when the  
level sensing assembly signals that water in the sump pit has  
reached a predetermined level.
